

Production Facilities

Innovation and development

We put innovative developments into practice by applying state-of-the-art by using the very latest materials and working in specialist teams to focus on every level of detail.

Our modern glass fibre reinforced plastic hangar produces glass fibre components to the very latest workplace regulations governing emissions, safety and environmental protection. Over and above shipbuilding, we are also heavily involved in steel construction and fitting. Our steel construction area produces sliding ramps for free-fall lifeboats, as well as compact-construction davit systems.

We also produce fittings and minor components in-house, such that the final assembly process pulls together components monitored for quality from A to Z. We make it our business to make every single day people spend at sea a safe one, and one they come home from. We're only able to do this because we care for every thing under one roof. We create concepts, manufacture in-house and check and re-check every aspect of quality right down to the last bolt.

Safety, in Sound Hands

Advice and support on an individual basis - flexible service, fast solutions:

Our position as one of the world's leading experts is not just down to our technical know-how and stringent quality management. Our high standards of consultancy and service also play a major role - as you would expect from an experienced family company. With closely-knit interdepartmental teams, a lean management structure and highly committed managers we are in a perfect position to offer our customers un-bureaucratic, flexible partnership. From the very first meeting, right through to after-sales service.
